

## Assignment 1

Due by 1/19 @ 11:59 p.m.

Before you begin this assignment, please read and familiarize yourself with the KLIWIN Corporation. In this assignment, you are an employee of this corporation. Your presentation should be geared to a specific client. Please identify the age group of the client appropriate for your presentation. For example, are they grammar school children, high school children, college age students, or working adults?

You are making a presentation to a client that you have just defined above. Your job is to explain to the client exactly what information security is. You may use your imagination in designing this presentation. It can take the form of a poster, brochure, video, power point presentation, discussion, or anything that is attention getting. This will be used by the client to educate their employees. **Be sure you include the characteristics of information as well as the components.** You should assume the client and their staff is not technology savvy.

Please post these to UTC Online and submit through there. I will not accept emailed assignments.
