

Assignment 5 (Security Plan)

Due: March 31 at 11:59 pm

For this assignment, you will write some security planning documents for the Computer Science department. There are 4 different types we will be concerned with for this project (enterprise, issue-specific, incident response, and disaster recovery). You are expected to create 4 different plans and possibly more depending on how you chose to do your Issue Specific planning (one plan or multiple ones for each issue). For the Issue Specific, you should do a plan for 5 different types of issues. You may and should review other security plans from the internet.

There are no requirements as to length or format. Your research should define this.
