				10th percentile		423

*The score distribution used to compute these statistics has been modified, to prevent the statistics from being dominated by a few very large institutions that contributed more than 1500 students to this data set, the score of each of its students has been weighted by the fraction 1500/n, where n is the number of students from that institution. For example, if an institution tested 3000 students, the score of each of its students would receive a weight of 0.5 when computing the statistics, each of its students would count only half as much as a student from an institution that tested 1500 or fewer students. Testing 3000 students would influence the statistics just as much as if it had tested only 1500 students.

*The score distribution used to compute these statistics has been modified, to prevent the statistics from being dominated by a few very large institution contributed more than 1500 students to this data set, the score of each of its students has been weighted by the fraction 1500/n, where n is the number of students from that institution. For example, if an institution tested 3000 students, the score of each of its students would receive a weight of 0.5 when computing the statistics, each of its students would count only half as much as a student from an institution that tested 1500 or fewer students. Testing 3000 students would influence the statistics just as much as if it had tested only 1500 students.
