

# Migrate your quiz from Proctorio to Verity

## How to Remove Proctorio Information

1. If your quiz was previously configured to use Proctorio, when you click on the quiz you may see a warning that the LTI has been removed or disabled, because it has. You need to edit the quiz to remove this warning and migrate to Verity.

### LTI Tool Missing

The associated LTI appears to have been removed or disabled. Please reconnect this course or contact your exam administrator to resolve this issue.

- a. Click the Edit button (or the build button if using Canvas New Quizzes).
  - b. In the instructions box, click on the red warning box and press delete/backspace on your keyboard. Do the same for any other boxes.
2. If you see that an access code is present or still enabled, REMOVE the access code.
  3. If **(Remotely Proctored)** is part of the quiz name, you may choose to remove that from the title.

Title

Midterm Exam (Remotely Proctored)

4. If you don't intend to use online proctoring, you can click save and your quiz is ready to go without proctoring enabled. If you wish to enable Verity for proctoring, proceed to the next section.

## How to Enable YuJa Verity

1. Add YuJa Verity to your course navigation.
  - a. In your course, click Settings, then the Navigation tab.
  - b. Find YuJa Verity and move it to the top section to enable it in your course.
  - c. Click Save

Course Details   Sections   **Navigation**   Apps   Fe:

Drag and drop items to reorder them in the course navigation.

Home	
⋮ Modules	⋮
⋮ <b>YuJa Verity</b>	⋮
⋮ Grades	⋮

2. Click the YuJa Verity link in your course.
  - a. Follow the instructions to install the Verity Extension.

3. Go to your quiz in your Canvas course and click edit (or Build for New Quizzes).
4. Under Settings for that quiz, check the box for **YuJa Verity Test Proctoring**.

#### YuJa Verity Test Proctoring

- Create a proctored environment to safeguard the integrity of your assessment through custom settings.

Configure Settings

5. Click Configure Settings
6. YuJa will walk you through configuring your preferred proctoring settings. For more information on how to configure these settings, refer to the instructions here: <https://support.yuja.com/hc/en-us/articles/6939221973271-Creating-a-Verity-Proctored-Quiz-in-Canvas-Classic-Quizzes>
  - a. At this time, we only have automated proctoring enabled. You will not be able to select Live Proctoring.

## YuJa Verity: Comparing YuJa Verity's Browser Extension and the Desktop Lockdown Module

When setting up YuJa Verity settings on a Canvas Quiz, there are two different modalities to choose from: the **Browser Extension** (available for Chrome, Microsoft Edge, Opera, and Brave) and the **Lockdown Module** (Desktop App). Read more about what each modality can do and compare their settings for your next quiz or test on Canvas.

### Comparing the Modalities

**The Browser Extension** allows you to apply standard proctoring features, which require test-takers to download the **Verity Browser Extension** on Chrome, Edge, Brave, or Opera.

**The Desktop Lockdown Module** allows you to apply advanced proctoring features, which require test-takers to download **Verity Lockdown** on their devices.

\* Note: Test-takers on Chrome OS must use a device with a managed guest session.

Both modalities do offer many of the same settings, but they differ depending on the level of proctoring needs. (See chart below to compare) Certain settings available for the Browser Extension require students to [turn on Incognito Mode](#) and enable the extension for it or manually disable all browser extensions before the quiz or test and re-enable them after the quiz or test. The Desktop Lockdown Module acts as a browser, so there is no need to turn on Incognito Mode or disable and re-enable all extensions.
